MCS - Micro Computer Systeme GmbH

MCS was founded in 1988. In 2004, a branch office was opened in Hamburg. To provide nationwide service, in 2006, MCS joined a cooperative of system vendors.

MCS has a catalog that offers over 25,000 products from the leading manufacturers throughout the entire IT sector.

With its many years of experience and in-depth expertise in IT infrastructure, MCS can provide practical advice to guide the decision-making process on customer projects.

MCS supplies, implements and configures IT infrastructure products for business customers. Quality is guaranteed through a quality assurance program and properly certified MCS employees. New solutions are quickly and reliably integrated into existing environments to optimize processes.

Customers in the public sector can access better contract terms through MCS's favorable contracts with various manufacturers.

With the use of advanced e-commerce systems, all customers benefit from a very efficient logistics management and short delivery times. In addition, MCS has a proven record in customizing e-commerce solutions for industrial clients and public sector customers and can adapt them individually to specific customer requirements.

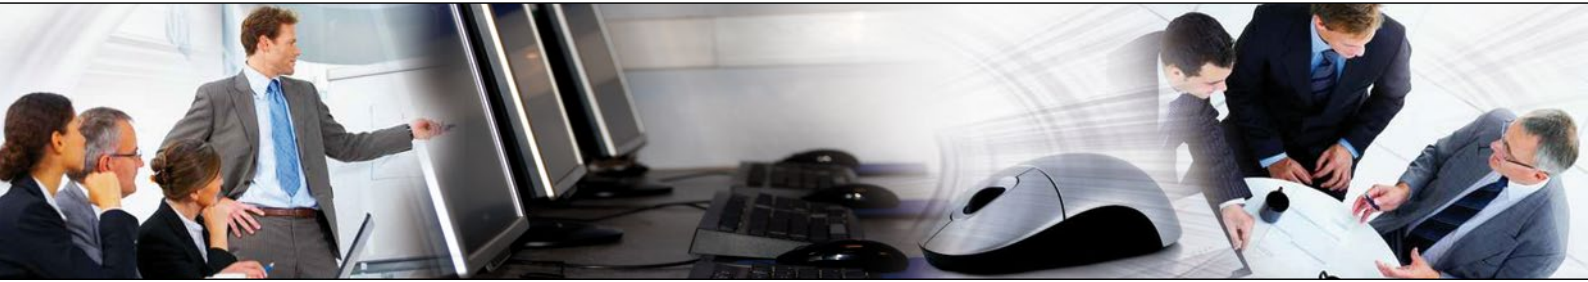

Due to strong cooperation with delivery companies and manufacturers, MCS can support international projects and deliver on schedule to the entire European Union.

The main strengths of MCS are IT solutions and the improvement of work processes. MCS covers all major IT areas, such as communication, virtualization, and the current focus on green IT.

After installation, MCS provides staff training and managed service for the entire infrastructure. All services are based on individual service level agreements. This includes remote access, user support and providing high availability.

For all projects, MCS includes IT security in their planning and collaborates with all relevant suppliers in this field. MCS also provides mail archiving systems which comply with legal requirements.
